LAW FIRM CYBER BREACH AVOIDANCE TIPS, BY: DEBORAH BJES, J.D., C.P.C.U.

The Cyber Breach

Unfortunately, law rms are s II regarded as "so " in the comparave world of cyber targets. Many law rms use systems that are easier to penetrate than those of their more sophis cated dients. This imbalance in technology leaves the law rm as the weakest link in the data chain and an obvious target for cyber criminals.

Further, lawyers, even if employed at rms with sophis cated systems, are vulnerable to socially engineered a acks. Lawyers must work e ciently, look for new opportuni es, and look to assist and procure poten al dients. Many lawyers will therefore click the links contained in unsolicited emails and con nue to fall for phishing scams.

Indeed, a 2015 Legal Technology Survey found that at least 80 of the 100 biggest law rms in the country had been hacked. Smaller rms are also increasingly subject to incidents involving ransomware and pay bitcoin ransoms to recover data.

Competence and Con den ality

In addi on to a nancial and a prac cal problem for lawyers, a cyber incident may lead to ethical problems as well. The ABA Model Rules have evolved to address technology and it is no longer acceptable for a lawyer to simply claim technological ignorance. What follows is a reminder of how the ABA Model Rules speak to technology:

ABA Model Rule 1.1: Competence, Comment [8]

"To maintain the requisite knowledge and skill, a lawyer should keep abreast of changes in the law and its prac ce including the bene ts and risks associated with relevant technology, engage in con nuing study and educa on and comply with all

con nuing legal educa on requirements to which the lawyer is subject."

ABA Model Rule 1.6, Con den - ality

"(c) A lawyer shall make reasonable e orts to prevent the inadvertent or unauthorized disdosure of, or unauthorized access to, informa on rela ng to the representa on of a dient." See also, Comment [18] and [19]

No lawyer wants to be the subject of a grievance or law suit as a consequence of technological incompetence and/or the failure to protect con den al dient informa on.

Tips for Maintaining Con den ality in the Cyber World

1. Find/Oure Your Weakest Links
All a orneys, sta, and vendors

LETTER FROM THE PRESIDENT, BY: ERIN K. HIGGINS, ESQ.

The cold weather is nally arriving in Boston, and a trip to New Orleans next fall is star ng to seem very appealing! Please mark your calendars now for our next PLDF Annual Mee ng, on October 3-5, 2018, at the Wes n Canal Park. The Board and the Program Commi ee will be working hard over this next year to assemble another terric state of programming, and more of our memorable eld trips and group dinners.

Thank you to those who a ended the 2017 Annual Mee ng in Chicago. We had a record number of a endees, and the member feedback has been terri c. If you have any thoughts about how to make next year's mee ng even be er, please email Chris Jensen, or anyone on the board, with your thoughts and sugges ons.

One idea that came out of the 2017 Annual Mee ng was to start a Young Professionals Com-

Erin K. Higgins of Conn Kavanaugh Rosenthal Peisch & Ford LLP of Boston, Massachuse s, is President of PLDF.

She may be reached at ehiggins@connkavanaugh.com.

mi ee, for those lawyers and claims professionals who have been in the industry for ten years or less. Molly Eden of Minnesota Lawyers Mutual is spearheading

CYBER BREACH AVOIDANCE TIPS, CONT'D

on should be mandatory for everyone in every law rm, including founding partners and recep onists. Employing a technologically pro cient team is the best preven on.

2. Enforce Polices to Curtail Human Error

The majority of all security incidents are caused by human error. Consequently, the most sophis cated security system in the world is irrelevant if the potenal for human error is unaddressed. For example, one law rm with a strong security system discovered someone had accessed dient les. A er performing numerous systems checks, the law rm ul mately discovered that an employee kept her passwords on a notepad in her unlocked desk drawer. A member of the deaning sta found the notepad and was able to access dient les.

Further, many law rm partners s II send con den al informa on from personal email accounts, use public Wi-Fi systems while wai ng for ights or having co ee, and take other risks, such as failing to password protect their smartphones. Training and enforcement of cyber policies for everyone in the rm is necessary to avoid these common human errors that rou nely lead to cyber breaches.

3. Send Fake Emails

To further provide cyber security training, a number of corpora ons now rou nely send fake phishing emails to test their employees' cybersecurity awareness and to gather open rates. These corpora ons then advise their employees of the open rate percentage and instruct them regarding the red ags that were ignored. For example, employees may ignore a change in the senders email address protocol, fail to hover over a link before dicking it (the name displayed may indicate that the link is not as represented), and may ignore other inconsistent informa on that would indicate that the email is a fraud. Corpora ons hope that this type of feedback is e ec ve in encouraging employees to exercise more care before opening the next link or providing their informa on to a poten al thief. Corpora ons also encourage sta to share any phishing emails that they receive for analysis and discussion.

4. Pause Before Sending Text Messages and Emails

The "reply to all' key has been responsible for conden ality breaches, embarrassment and awkwardness. Further, accidentally sending to the wrong "Mary" or not realizing the actual plain has been copied on a document can cause further problems. Disabling the "reply to all" bu on and pausing an extra second before pushing "send" to review the distribu on list is obviously good prac ce.

Further, we have all likely read about a certain athlete's a orney who accidentally texted a reporter a sentence that started "Heaven help us..." Perhaps simply avoiding the text message in a professional se ng is the best idea. While a text may be a great way to communicate with friends and family, it is not the ideal form of communica on to use professionally due to its fast and informal nature.

5. Encrypt

Encryp on is the best alterna ve for protec ng sensive data. Encrypted data is unreadable if a cell phone or computer is lost or if the data ends up in the wrong hands. Encryp on, however, is the least used security feature found in most law rms. While encryp on of all les is currently not ethically mandated, the failure to encrypt could arguably be viewed as a breach. ABA Model Rule 1.6 reads:

...This duty, however, does not require that the lawyer use special security measures if the method of communica on a ords a reasonable expecta on of privacy. Special circumstances, however, may warrant special precau ons. Factors to be considered in determining the reasonableness of the lawyer's expecta on of conden ality include the sensi vity of the informa on and the extent to which the privacy of the communication is protected by law or by a conden ality agreement. Comment [19]

Lawyers should therefore evaluate the security needs of the actual data for each engagement to make sure that the con den ality needs of their clients are adequately protected. Obtaining the client's wri en consent before using email or text messaging to communicate with them, while advising of poten al con denality issues, is also advisable. If your law rm does not encrypt data, disclose that to the client and provide them with the opportunity to refuse email communications from your rm.

6. Passwords

Law rms should encourage strong passwords. The password should contain le ers, both upper and lower case, characters, and numbers. Passwords should be changed regularly (every 90 days) and never repeated. One idea is to anchor your password to a phrase instead of a word. For example "She Loves to travel to Warm Weather and go swimming" can translate to the following password by using just the rst le er of every word, with capitaliza on every so o en: SL tWWags. The value to this new password is that it is very hard to guess without knowing the original sentence, but yet easy to remember. Adding numbers and characters will then create a stronger password. Another op on is to use a secure password generator.

The Goud

While many a orneys conceptually understand that informa on stored in a cloud is stored o site, many have no idea that depending upon the vendor, cloud data could be stored interna onally, governed by foreign law, and subject to search and seizure. Further, if an a orney places data in the cloud that is subject to

"[A] number of corpora@ns now rou@nely send fake phishing emails to test their employees' cybersecurity awareness."

CYBER BREACH AVOIDANCE TIPS, CONT'D

state or federal privacy laws, the client should rst provide their informed and wri en consent for such storage (adding this item to the engagement le er may be an op on). Finally, the a orney should check with the bar associa on for their respec ve state's ethical opinions that govern doud storage.

8. Update Your Systems

Law rms should update their systems, including the VPN, an virus, an -spyware and spam Iters rou nely. Class ac on lawsuits arising out of data viola ons are exploding and the rst public data security class ac on complaint against a law rm was recently led in Federal Court in Chicago. The plain sallege that the rm's outdated systems failed to protect client data. Damages are sought for the threat of a breach and the "diminished value" of the law rm's services. Law rms should periodically update systems.

9. Vet Vendors

Vendors have been iden ed as the weak link in certain large exposure hacking incidents. Recall that the Target hackers were able to access the chain's security systems by stealing creden als from a vendor. Examine all vendors' cyber security protocols (does the vendor encrypt data, use a VPN system) as well as the vendor's insurance policy and all controlling contracts. Understand where the vendor will store the informa on – interna onal storage may present problems. Examine indemni ca on dauses and provisions regard-

ing who will be expected to pay in the event of a data breach.

10. Have a Plan

Every law rm should establish a plan to follow in the event of a cyber breach. Further, like re drills, law rms should prac ce cyber drills. Are documents rounely backed up? Are copies of the most important documents at an o -site, secure loca on? In the event of a hack or a ransom, does everyone know who to call? Vendors should be selected ahead of me so that in an emergency, the law rm is not panicked and scrambling. For example, privacy counsel, to establish immediate privilege and provide no ce requirement advice, can easily be researched ahead of me. Selec ng or crea ng a list of professionals to assist with restoring data or handling a ransomware incident should also be researched. Finally, cyber liability coverage can help to not only cover the costs related to a data breach, such as no ca on expense and regulatory nes, but can also provide professionals to assist in case an emergency.

WEAKENING MEDIATION CONFIDENTIALITY: PROS AND (MOSTLY) CONS, BY LOUIE CASTORIA, ESQ.

In mythology, Pandora opened a forbidden box, loosing all the world's woes upon humankind. One might think we would have learned not to look into forbidden boxes or to kick hornets' nests, but our pointless curiosity some mes gets the best of us. California's Law Review Commission (the "California Commission") has proposed an amendment to the state's Evidence Code, carving out a substan al excep on to the near-absolute conden ality of communica ons during and preparatory to media ons.

In 2012 the California Legislature directed the California Commission to analyze "the rela onship under current law between media on con den ality and a orney malprac ce and other misconduct," in response to a California Supreme Court decision, Cassel v. Superior Court, 244 P.3d 1080 (S.C. Cal., 2011), which had strictly construed the state's media on statutes in its Evidence Code to require con den ality of all media on communica ons, except as expressly excluded.

The proposed change would allow communica-

ons into evidence in a orney malprac ce cases, disciplinary proceedings, and fee disputes when "relevant to prove or disprove an allega on that a lawyer breached a professional requirement when represen ng a dient in the context of a media on or a media on consulta on[.]"

Proponents of the statute, which would become California Evidence Code 1120.5, if enacted into law, focus on a perceived unfairness to dients who sue their lawyers for malprac ce, and to lawyers defending themselves against such suits, when the alleged misconduct occurs within the sanctum sanctorum of media on.

The poten al impact of the proposed statute extends beyond the Golden State. This ar cle addresses the current inconsistency among state and federal laws governing the inviolability of media on communica ons, and argues against opening Pandora's box, even just to take a peek inside.

Inconsistency of Media on Con den ality Laws The Uniform Media on Act ("UMA"), dra ed by the Na onal Conference of Commissioners on UniPLDQ's Winter 2018

WEAKENING MEDIATION CONFIDENTIALITY, CONT'D

form State Laws, provides broad con den ality for all communica ons made in media ons, but carves out communica ons "sought or o ered to prove or disprove a claim or complaint of professional misconduct or malprac ce" led against a mediator, party, par cipant, or representa ve at a media on. Other excepons exist in the UMA, such as communica ons during pretextual media ons, such as ones held to advance criminal schemes.

The UMA has been enacted in eleven states and the District of Columbia, with some modi ca ons. (Those states are: Hawaii, Idaho, Illinois, Iowa, Nebraska, New Jersey, Ohio, South Dakota, Utah, Vermont, and Washington. It has been proposed in New York and Massachuse s.) The California Commission's proposal does not track the UMA, though it shares a similar carve-out for malprac ce cases.

Surveying other states' laws and judicial rulings, the California Commission concluded:

The statutes and rules protec ng media on communica ons vary widely from state to state. Among other things, they di er in whether, and to what extent, they permit the use of media on communica ons in resolving an allega on of a orney misconduct. In seven states (plus the UMA states), a statute or rule protec ng media on communica ons has one or more excep ons that expressly addresses alleged a orney misconduct or alleged professional misconduct more generally (thus encompassing a orney misconduct). Those states are Horida, Maine, Maryland, Michigan, New Mexico, North Carolina, and Virginia.

The California Commission's full survey of the states' laws and judicial ruling on media on con den ality may be downloaded at: h p://www.drc.ca.gov/pub/2017/MM17-30.pdf. Please see pages 57 through 70, and the numerous footnotes therein for speci c states' laws.

In contrast, the Federal Rules of Evidence do not include a "media on privilege," as such. Rule 408 excludes evidence of se lement communica ons from being introduced to show a party's liability or lack thereof in an underlying claim, but provides no protecon for other uses of such evidence. Some federal courts have used Rule 501, which states that they shall "be governed by the principles of the common law as they may be interpreted by the courts of the United States in the light of reason and experience," to protect media on con den ality, recognizing that it generally exists in other jurisdic ons. However, a court-by-court approach provides neither li gants nor lawyers sucient guidance as to what they may say in a media on with con dence that it will not be repeated.

California's current media on statutes are found in its

Evidence Code, sec ons 1115 through 1128. They create a comprehensive structure for media ons, including con den ality, but also conclusively answering ques ons that have vexed other states, and are not resolved by the UMA. The following is an abbreviated summary of the key points as to con den ality in California:

Con den ality applies to all communica ons, oral and wri en, in a media on and in preparatory media on consulta ons.

It is not necessary for the par es to agree in wri ng that the media on is con den al, though they may waive con den ality by mutual, wri en agreement.

No one may be subpoenaed to tes fy about, in any non-criminal proceeding, or produce records of communica ons made in a media on.

Con den ality does not apply to certain informa on exchanged in family law cases, nor to judicial se lement conferences.

Noncommunica ve conduct during a media on is not con den al. As an example, a derogatory comment regarding an opposing party's parentage is con den al, but a physical assault or ba ery is not.

Any reference to a media on communica on at trial is treated as an irregularity, poten ally leading to a mistrial and/or sanc ons. In other noncriminal proceedings such a reference is grounds to vacate or modify a ruling made in such hearings.

A wri en, signed se lement agreement that is created at a media on is admissible to prove that a se lement was reached and on what terms.

(Comment: it is common in California, though not required, that the par esuse a S pula on for Se lement under California Code of Civil Procedure sec on 664.6 to memorialize the se lement terms. This document may be led with the court in which the case is pending to enforce its terms, without any party needing to iniate a separate ac on for breach of contract. If the se lement terms are complex or open-ended on any point, a 664.6 s pula on may not be feasible.)

With poten ally con ic ng standards in state and federal courts, it is important to know which state's law applies and what it provides, rather than assuming con den ality. Many mediators thus require the pares and counsel to sign media on con den ality agreements at the beginning of media on sessions.

Courts generally uphold such agreements, as famously occurred in Facebook, Inc. v. Paci c Northwest So-ware, Inc., 640 F.3d 1034, 1041 (9th Gr. 2011), and recounted in the Im, "The Social Network." Mark Zuckerberg's college collaborators, the Winklevoss brothers, sought to undo their signed se lement agreement with him based on communica ons during

"The [Uniform

MediaOon Act] has
been enacted in
eleven states and the
District of Columbia,
with some
modil caOons.."

WEAKENING MEDIATION CONFIDENTIALITY, CONT'D

a media on that resulted in the se lement. The par es had signed a con den ality agreement in advance of the media on, which the court upheld as valid. However, such agreements do not bind persons who are not in the room and may have an interest in the se lement amount or terms.

Indisputably Se led?

Imagine the following situa on: a securi es broker leaves a brokerage rm in New Mexico to join a similar rm in Colorado, taking a dient list with her, and daiming that she generated the list before she joined the New Mexico rm. The broker and the two rms agree to mediate their dispute in neutral territory, California, and to use a private, solo prac oner mediator in Santa Barbara.

At the end of a twelve-hour media on the par es agree on a se lement amount and sign a term sheet that uses the term "the Subject Accounts" to describe the scope of the mutual release. Later, a dispute arises as to which of two account lists constuted the Subject Accounts. The broker and Colorado rm le suit in Denver for breach of contract against the New Mexico rm (assume proper jurisdic on). The broker's estranged husband, who used to be her partner in her original brokerage, gets wind of the se lement and sues in New Mexico, claiming rights to the se lement amount under his partnership agreement with the broker and New Mexico's community property law.

Here are three issues that arise from this fact pa ern—there are several others that could be posed:

Does California law govern the admissibility of communica ons during the media on regarding which list contained the Subject Accounts?

If the par es signed a con den ality agreement at the media on, does it bar the husband from obtaining through discovery the par es' media on briefs, or deposing the mediator?

The broker later claims that the a orney who jointly represented her and the Colorado rm failed to disclose a con ict of interest, and urged her to se le at an unreasonable number to bene t the lawyer's other client, the rm. She les a third-party complaint against the a orney in the Colorado ac on, seeking to void the se lement agreement, and money damages. Can the a orney's advice to her during the media on be introduced in evidence?

My views on the above ques ons:

Neither Colorado nor New Mexico is bound to follow California law, unless the par es to the media on all agreed in wri ng that California law would govern. However, both states recog-

nize media on con den ality to a lesser degree than California.

The media on par es' con den ality agreement does not bind the husband, a non-signatory. New Mexico law would govern his rights to discovery, if any.

The Colorado a orney was not a party to the California con den ality agreement, and should not be bound by it. To defend himself against the malprac ce claim he should be able to introduce evidence of what he recommended, as can the broker in prosecu ng her third-party complaint against him. Note that the husband's subpoena to the mediator in Santa Barbara can probably be quashed by a California court on the basis that he conducted the media on in California.

Please note that these views are debatable under present law. The dra ers of the UMA recognized a bene t of uniform media on con den ality statutes, and posed an even more perplexing scenario: "Media on sessions are increasingly conducted by conference calls between mediators and par es in di erent States and even over the Internet. Because it is unclear which State's laws apply, the par es cannot be assured of the reach of their home state's con denality protec ons." (Prefatory Note to the UMA)

The California Proposal

The California Commission seems to be ready to muddy the currently clear waters of California's media on con den ality. Proposed Evidence Code sec on 1120.5, if adopted by the Legislature and signed into law, would diminish the nearly absolute con den ality rule in civil cases, e ec ve on January 1, 2019, under a two-pronged test:

The evidence must be relevant to prove or disprove an allega on that a lawyer breached a professional requirement when represen ng a dient in the context of a media on or a media on consultation.

The proceeding in which the evidence is pro ered must be an ac on for damages based on alleged malprac ce, a disciplinary proceeding, or a fee dispute between lawyer and client.

A pleading that meets these tests must be served by mail on all media on par cipants whose whereabouts can be iden ed. The court may use a sealing order, a protec ve order, a redac on requirement, an in camera hearing, or a similar judicial technique to prevent public disclosure of media on evidence, but is not required to do so.

The proposed law would make mediators exempt from providing tes mony or documents in a media on malprac ce case, except in criminal cases and a few other kinds of cases. Mediators are not made immune

"The proposed law would make mediators exempt from providing tes@mony or documents in a media@on malprac@c case ..."

WEAKENING MEDIATION CONFIDENTIALITY, CONT'D

from liability by the proposed law, nor is any exis ng mediator immunity revoked. (In some situa ons mediators may have quasi-judicial immunity.)

Sec on 1120.5, as currently dra ed, does not limit the gathering or use of media on evidence in a malprac ce case to the dient and a orney in ques on. As the requirement of service by mail upon all par cipants hints, the plain and defendant may introduce evidence from other par cipants (except the mediator), thus resurrec ng a dispute that those par cipants considered se led, and poten ally revealing their con denal communica ons with the defendant-a orney at the media on.

One can easily imagine a law-and-mo on morass for a trial court judge, umpiring the calls of "fair" and "foul" in discovery requests and deposi on ques ons among par es and nonpar es, all over a case that, by de nion, was se led or that the par estried to se le.

If It Ain't Broke:

Public Comments on the Proposal

As the California Commission candidly noted about the public comments on its proposed statute, "The 155 pages of comments include sca ered words of praise or apprecia on for the Commission, its sta, its process, and its work on this study. In general, however, they do not have much posi ve to say about the Commission's proposal."

The main arguments advanced by those suppor ng the proposal are that it allows plain s and defendant-a orneys to introduce evidence that may be crucial to their respec ve cases, and that a malprac ce excep on to media on con den ality would bring California more in line with other states.

Against the proposal is an array of judicial, legal, and media on organiza ons, including the California Judges Associa on, and the Academy of Professional Family Mediators, the California Dispute Resolu on Council, and the Center for Con ict Resolu on. The proposal accomplished one thing that no one would have predicted: the Consumer A orneys of California and the California Defense Counsel subming a joint le er opposing it—a rare example of something they agree upon.

Both sides of the debate advance a "why x it" argument, the proponents saying that in states where there is no malprac ce excep on to media on con den ality there appears to be no reluctance to mediate, and the opponents poin ng out that there is li le evidence that media on-malprac ce cases are more prevalent in those states than in California.

In this writer's opinion, both sides miss the point: media on-malprac ce cases are few and media on use is high not because of statutes governing mediaons, but because media ons have become a principal and e ec ve way of resolving civil disputes. Once thought "novel," media ons have become de rigueur

in modern li ga on. Media ons work because they allow li gants a chance to step away from the brink, to see the case from the other side's or sides' viewpoints. For counsel, media ons provide a neutral messenger, someone with an aura of authority to deliver hard facts to all par es, without being thought a traitor to any client, because the mediator has none.

There are cases of "se ler's remorse," in which a party gets cold feet a er signing a se lement agreement. California puts a par cularly high burden of proof on such cases, proof to a "legal certainty" that a be er result would have been obtained if the case had bee tried to verdict. (Filbin v. Fitzgerald, 343 P.2d 118 (Cal. Ct. App. 2012).) California imposes a high threshold on the admissibility of media on communica ons, I believe for the same reason: the nality of mediated se lements is essen al to the func oning of the most populous state's underfunded judicial system. Forcing overcrowded courts to consider Mulligans on se led cases, under the guise of se le-and-sue or media onmalprac ce, is a waste of scant judicial resources. Cases se le at media on because media ons work.

Another argument that appears in the public comments on proposed sec on 1120.5 is the par es' "right to choose" con den ality. Exactly where this right springs from is unclear, but if it does exist, the burden to explain it would fall upon counsel on a case-by-case basis, whereas under current law it is a given, like the statute of limita ons, the rule against perpetui es, and the in eld y rule. Public policy dictates that some rules be made by the Legislature and be uniform, elsewise every decision is arguable.

"Media on privilege," as it is some mes called, is a rule of evidence, not an immunity from liability. A orneys can s II be sued from malprac ce during mediaons, but neither side can rely on the he said/she said evidence of what is said during those hours of nego aon. Other evidence—communica ons before and a er a media on, such as privileged emails and prese lement tes mony—can be introduced. If the premedia on evalua on by counsel says the case is worth \$500,000 and it se les for \$5,000, those facts get into evidence.

We rou nely accept eviden ary restric ons in other communica ve contexts—penitent/confessor, doctor/pa ent, spouse/spouse. In those contexts the privacy of the communica on is only of interest to its two parameters to its round of the communication of the commu

es, but in a media on all par es, even adverse ones, share the same interest that none of their con den al communica ons be disclosed. Disclosure by one opens the door to disclosure by all.

As dra ed, sec on 1120.5 allows any "relevant" informa on into evidence, not only the communica on between the client (now plain) and the a orney (now defendant). In a real sense, all par cipants in a media on are the holders of the privilege, which ex-

plains why they are all en tled to wri en no ce of a media on-malprac ce suit.

There is a value to uniformity, but also to diversity and experimenta on. California has a stronger media on con den ality statute than other states because it needs one. It may not be the answer for all, any more than its three-year statute of limita ons for fraud needs to be universal. But it works. It ain't broke.

CONTRACTOR LICENSURE REQUIREMENTS: BEWARE!, BY: GLEN OLSON, ESQ. AND ARI BARUTH, ESQ.

California law allow for harsh results when contractors and/or owners overlook state licensure requirements. The issue most o en hits the radar screen too late – a er a dispute arises and the pares are in li ga on. A recent California decision addresses this par cularly dangerous area for contractors, in which even crea ve pleading by the plain can some mes not save the day. Design professionals need to be aware of the current state of the law in this area in the event they are in li gaon with unlicensed contractors.

California Business & Professions Code § 7031(a) requires a party to maintain an ac ve contractor's license throughout the project at issue in order to maintain or defend an ac on for compensa on for services performed for which a contractor's license is needed. In Phoenix Mechanical Pipeline, Inc. v. Space Explora on Technologies Corp., (Cal. Ct. App. June 13, 2017), California's Second Appellate District Court of Appeal interpreted this statute in denying, in part, Phoenix Mechanical Pipeline, Inc.'s ("Phoenix Pipeline") appeal of a trial court ruling gran ng Space Explora on Technologies Corporaon's ("SpaceX") demurrer to Phoenix Pipeline's second amended complaint, without leave to amend.

Phoenix Pipeline contracted with SpaceX to provide plumbing, concrete removal and electrical services. Phoenix Pipeline alleged SpaceX paid for such services from 2010 to October 2013, but failed to pay Phoenix for just over \$1,000,000 in services performed from October 2013 to August 2014. Phoenix Pipeline contended this work was performed pursuant to a series of invoices cons tung individual agreements between SpaceX and Phoenix Pipeline and alleged causes of acon for breach of contract and breach of the covenant of good faith and fair dealing.

SpaceX demurred to the ini al complaint, arguing Phoenix Pipeline was not licensed. Phoenix Pipeline elected to lea rst amended complaint and added allega ons that it had a licensed "responsible managing employee" on the job. This individual owned

a separate en ty, Phoenix Mechanical Flumbing, Inc., which "oversaw all services" provided by Phoenix Pipeline.

SpaceX led another demurrer, arguing the employee's license failed to sa sfy the requirements of sec on 7031(a). SpaceX's demurrer was sustained with leave to amend.

Phoenix Pipeline then led a second amended complaint with two modi ca ons. It recast the licensed "responsible managing employee" as a "responsible managing o cer" and expanded the descrip on of the employee's role on the project. The second amended complaint also dis nguished between "subcontrac ng services" for which a license was required and "non-contrac ng services" for which no license was needed.

SpaceX again demurred based on Phoenix Pipeline's con nued failure to allege it held a contractor's license. The court sustained the demurrer without leave to amend, promp ng an appeal.

The appellate court weighed whether Phoenix Pipeline's allega ons were su cient to overcome the requirement in sec on 7031 that it must have had a valid license to recover in an ac on for payment for services for which a contractor's license is necessary. The Court of Appeal found Phoenix Pipeline's pleading failed to meet that standard.

First, the Court held that Phoenix Pipeline failed to allege that Phoenix Pipeline – as opposed to another en ty - held a contractor's license, and cited various decisions interpre ng sec on 7031 to provide that the failure to comply with the licensing requirements of the statute bars a person or en ty from recovering compensa on for any work performed under a contract that requires a contractor's license. We examine those decisions in the following sec on below in evalua ng the poten ally draconian results for a contractor working without proper licensure.

Second, the Court held that alleging a "responsible managing o cer" fails to meet sec on 7031's requirement that Phoenix Pipeline cannot pursue a claim without a valid contractor's license. Several

"Design professionals need to be aware of the current state of the law in this area in the event they are in li@ga@on with unlicensed contractors."

CONTRACTOR LICENSURE REQUIREMENTS, CONT'D

California cases have held that licenses held by partners, managing o cers and/or owners of contrac ng en es were insu cient to sa sfy sec on 7031. Thus, the fact that Phoenix Pipeline alleged it had a licensed "responsible managing o cer" at the scene, without more, did not meet the requirements of the statute.

Third, however, the Court held Phoenix Pipeline did plead su cient allega ons to maintain a cause of ac on for recovery for services it performed (including maintenance, repair, clean-up, hauling, disposal, etc.) which did not require a license. Since each of those invoices was alleged as cons tu ng an individual contract between Phoenix Pipeline and SpaceX, the Court overruled the trial court to the extent that Phoenix Pipeline sought compensa on under those alleged invoices for tasks performed for which no contractor's license is required.

This decision illustrates that California courts will interpret the condi ons of sec on 7031 quite strictly, as the statute represents a "legisla ve determina on that the importance of deterring unlicensed persons from engaging in the contrac ng business... can best be realized by denying violators the right to maintain any ac on for compensa on." The license must be held by the contrac ng en ty itself; licenses held by employees, partners, individual owners, or other ancillary individuals are not su cient to support a daim for recovery of payment. This public decision illustrates the importance of licensure for a contractor making an a rma ve daim, but sec on 7031 also requires su cient licensure in order for a contractor to defend an ac on. As outlined below, a contractor (de ned to also include subcontractors) cannot defend itself in an ac on for fees absent proper licensure.

Other Implica ons of California's Strict Contractor Licensure Requirements

California law requires that any person engaged in the business of a contractor, or that acts in the capacity of a contractor, must be properly licensed by the Contractors State License Board ("CSLB"). A contractor is de ned broadly, as follows:

... a contractor is any person who undertakes to or o ers to undertake to, or purports to have the capacity to undertake to, or submits a bid to, or does himself or herself or by or through others, construct, alter, repair, add to, subtract from, improve, move, wreck or demolish any building, highway, road, parking facility, railroad, excavaon or other structure, project, development or improvement, or to do any part thereof, including the erec on of sca olding

or other structures or works in connec on therewith, or the cleaning of grounds or structures in connec on therewith, or the prepara on and removal of roadway construc on zones, lane dosures, agging, or tra c diversions, or the installa on, repair, maintenance, or calibra on of monitoring equipment for underground storage tanks, and whether or not the performance of work herein described involves the addi on to, or fabrica on into, any structure, project, development or improvement herein described of any material or ar de of merchandise. "Contractor" includes subcontractor and specialty contractor. "Roadway" includes, but is not limited to, public or city streets, highways, or any public conveyance.

Cal. Bus. & Prof. Code § 7026.

Phoenix Pipeline illustrates that an unlicensed contractor performing work in California requiring a license will likely be subject to a harsh penalty. Courts explain these requirements are designed to protect the public against incompetency and dishonesty in those who providing construc on services. Hydrotech Systems, Ltd. v. Oasis Waterpark, 2 Cal. 3d 988, 995 (1991). For example, an unlicensed contractor may be subject to both civil and criminal penal es. See, e.g., Cal. Bus. & Prof. Code § 7027.3 (one year imprisonment and/or \$10,000 ne for inten onal use of another person's license with intent to defraud), Cal. Bus. & Prof. Code § 7028 (contrac ng without a license is a misdemeanor; penalty for second o ense is \$4,500 minimum and 90 day county jail me), Cal. Bus. & Prof. Code § 7028.7 (CSLB cita on and ne of \$200-\$15,000), Cal. Bus. & Prof. Code § 7117 (CSLB disciplinary ac on); and Cal. Lab. Code §§ 1021-1023 (civil penalty of \$200/day per employee performing work for unlicensed contractor).

The penal es resul ng from non-compliance with sec on 7031 include the unlicensed contractor's inability to maintain a lawsuit to recover compensaon for its work. Moreover, a poten ally even more onerous penalty is that an unlicensed contractor may be required to disgorge any compensa on it has previously been paid for performing work requiring a license. Cal. Bus. & Prof. Code § 7031(b). Under sec on 7031(b), "[a] person who u lizes the services of an unlicensed contractor may bring an ac on . . . to recover all compensa on paid to the unlicensed contractor for performance of any act or contract." There is li le case law interpre ng the socalled "disgorgement" penalty since its addi on to Sec on 7031 is rela vely recent (added by amendment in 2001). Below is a discussion of the four opinions published to date addressing the topic.

CONTRACTOR LICENSURE REQUIREMENTS, CONT'D

In Wright v. Isaak (2007) 149 Cal.App.4th 1116, a contractor sued two homeowners for unpaid amounts in connec on with a home remodeling project. The homeowners responded with a cross-complaint against the contractor seeking, among other things, the return of all amounts they had paid him on the ground he did not have a valid contractor's license. Although the contractor was licensed, he grossly underreported his payroll to the State Compensa on Insurance Fund, and never obtained workers compensa on for his crew working on the home remodeling project.

Both the trial court and Court of Appeal agreed with the homeowners that, under California Business & Professions Code § 7125.2, the contractor's license was automa cally suspended for his failure to obtain workers compensa on insurance for his employees. The courts each rejected the contractor's argument that the suspension could not take e ect un I the contractor received a no ce of suspension from the registrar of contractors. Because the contractor failed to properly report his payroll and obtain insurance for his workers before, during and a er the home remodeling project, the contractor was out of compliance. Despite a seemingly draconian result, the court held that the homeowners were en tled to recover all amounts paid to the contractor under Business & Professions Code § 7031(b).

In Goldstein v. Barak Construc on, 164 Cal. App. 4th 845 (2008), homeowners entered into a contract with Barak Construc on to remodel their home. Barak began work on the project but failed to obtain a contractor's license for several months. The homeowners paid Barak \$362,629.50 before Barak abandoned the incomplete project. The homeowners then led suit under Business and Professions Code § 7031(b), seeking restu on of the full amount paid, plus an amount for a orneys' fees and costs. The superior court ruled in favor of the homeowners.

In con rming the trial court ruling the appellate court rejected Barak's conten on that the recoupment acon was puni ve in nature rather than a daim for money based upon a contract. It also rejected Barak's conten on that the amount of the recoupment was improper and excessive because Barak had passed along most of the money it received to laborers or material suppliers for the project. Though the court recognized the draconian nature of the recoupment ac on, California law dearly allows recovery of all compensa on paid to the unlicensed contractor regardless of whether the amounts paid are ul mately retained by it. And the Court of Appeal rejected the conten on that the amount of the monies returned should be reduced by the amount earned by Barak a er it became a licensed contractor. The court reiterated that to recover for

work performed on a project, a contractor must be licensed at all mes during which it performs the contractual work.

A third unlicensed contractor scenario was discussed in Oceguera v. Cohen, 296 Cal. App. 2d (2009). There, the contractor was a partnership consis ng of three partners. Only one of the partners, Golen, was licensed. Golen executed a disassocia on no ce in accordance with sec on 7076(c) of the California Business & Professions Code which provides that "partnership license shall be canceled upon the disassocia on of a general partner or upon the dissolu on of the partnership . . . [T]he remaining general partner or partners may request a con nuance of the license to complete projects contracted for or in progress prior to the date of disassocia on or dissolu on for a reasonable length of me . . ."

A er Golen led his disassocia on no ce the two remaining partners began a residen al project. Following comple on, the project owner sued the partnership for defec ve construc on. In addi on to seeking damages for repair of the defec ve work, she also sought disgorgement of the \$32,000 paid under sec on 7031 (b). The issue on appeal was limited to whether the trial court erred in entering a judgment in favor of the owner on the refund of the \$32,000. The Court of Appeal a rmed that defendants did not establish that the substan al compliance doctrine applied because they were never licensed before entering into and performing work, and because Golen's associa on with the partnership ended on the date stated in the applica on for replacing the qualifying individual. Neither of the other individuals in the partnership could sa sfy the substan al compliance doctrine because neither was licensed before entering into the contract.

More recently, in White v. Cridlebaugh, F053842 (July 29, 2009), the Whites retained a contractor to build them a log cabin. Due to concerns over the contractor's billing and competency, the homeowners terminated the construc on contract. The par es led complaints against one another including the homeowners' request for disgorgement of amounts paid to the contractor. The Court of Appeal considered, among other things, "whether the Whites properly brought a claim for reimbursement under sec on 7031(b)."

The appellate court concluded that the contractor was not quali ed to be licensed because it did not have a quali ed responsible managing o cer or employee in place, and that its license therefore was suspended by opera on of law. Hence, the Court ordered reimbursement of all monies paid to the contractor under sec on 7031(b). The Court further considered whether "the recovery of compensa on authorized by sec on 7031 (b) [may] be reduced by o sets for materials and service provided or by claims for indemnity and contribu-

CONTRACTOR LICENSURE REQUIREMENTS, CONT'D

on?" The Court concluded that it may not, and that under the express terms of the statute, "unlicensed contractors are required to return all compensa on received without reduc ons or o sets for the value of the materials or serviced provided."

The requirement of Sec on 7031 that a license be maintained "at all mes" conveys the California Legislature's obvious intent to impose a s all-or-nothing penalty for unlicensed work by specifying that a contractor is barred from all recovery for such an "act or contract" if unlicensed at any me while performing it. This all-or-nothing philosophy demonstrates that contractors with lapses in licensure may not recover even par al compensa on by segmen ng the licensed and unlicensed por ons of their performance.

Licensure Issues Arising
From Unlicensed Subcontractors

Contractors and subcontractors must be extremely careful about their licensure status. California Labor Code § 2750.5 creates a presump on that a worker (such as a subcontractor) performing work for which a license is required is an employee and not an independent contractor. "Any unlicensed subcontractor is the employee of the general contractor; consequently, as a ma er of law, the employee of an unlicensed subcontractor is the employee of the principal contractor." Neighbours v. Buzz Oates Enterprises (1990) 217 Cal.App.3d 325, 330; See also Sanders Construcon Co. Inc. v. Cerda (2009) 175 Cal.App.4th 430 (general contractor is liable for unpaid wages, worker's compensa on insurance, withholding taxes, and other liabili es arising from retaining an unlicensed subcontractor).

Contractors retaining unlicensed subcontractors must have worker's compensa on insurance covering individuals deemed employees of the contractor as a ma er of law. If not, the contractor will not sa sfy all licensure requirements, will not sa sfy the "at all mes" language explained above, and may be required to disgorge all payments made on the project. Moreover, a contractor cannot recover on a mechanic's lien for money voluntarily advanced to an unlicensed subcontractor. Holm v. Bramwell (1937) 20 Cal.App.2d 332. Holm and its reasoning was discussed

Glen R. Olson is a partner of Long & Levit LLP, in San Francisco, specializing in professional liability and insurance coverage li ga on. He defends lawyers, real estate agents, insurance agents and brokers and escrow agents. Glen may be reached at

golson@longlevit.com.

at length in MW Erectors, Inc. v. Niederhauser Ornamental and Metal Works Co. Inc. (2005) 36 Cal.4th 412. There, the California Supreme Court reasoned that "Holm held that because a subcontractor was unlicensed..the subcontract was illegal, void, and unenforceable; hence, the general contractor could not recover, under a mechanic's lien, compensa on a ributable to the subcontractor's work. Sgni cant in Holm's reasoning was the wording of the predecessor statute to sec on 7031, as then in e ect."

This reasoning raises two ques ons answered perhaps by common sense but not by law: (1) may a contractor recover on a breach of contract theory from an owner fees incurred for work performed by an unlicensed subcontractor, and (2) does the law leave open the possibility that a licensed contractor could hire all unlicensed subcontractors, collect money from the owner for the unlicensed work, and then seek reimbursement from the unlicensed subcontractors per sec on 7031?

As to the rst ques on, a contractor cannot recover on a mechanic's lien from an owner for work performed by an unlicensed subcontractor, but there is no clear law on whether a licensed contractor may pursue the funds on a breach of contract ac on. The logical extension of the cases discussed above would appear to be that a contractor cannot recover on either a mechanic's lien or a breach of contract theory.

On the second ques on, a loophole does appear to exist in the law allowing a licensed contractor to hire unlicensed subcontractors, collect funds from the owners for work performed by the unlicensed subcontractors, and then sue the same subcontractors under secon 7031. Hiring unlicensed subcontractors violates Business and Professions Code § 7018, but a viola on does not implicate any poten al disgorgement of funds from the unlicensed contractor. An owner may never know about the licensure of the subcontractor and it is conceivable a contractor, under the law as currently wri en, could proceed with this approach un I a complaint were raised with the state licensing board. This raises an interes ng poten al loophole in the law and illustrates the need for increased cau on from an owner in ensuring that all contractors and subcontractors are licensed.

"Contractors and subcontractors must be extremely careful about their licensure status."

ELDER ABUSE AVOIDANCE: COUNSELING PROFESSIONALS, BY: JEFF C. HSU, ESQ. AND ANGELA S. RHO, ESQ.

According to the U.S Census Bureau, as of July 1, 2015, 47.8 million people in the United States are age 65 and older, accoun ng for 14.9 percent of the total popula on. The senior popula on grew 1.6 million from 2014, and is steadily growing. U.S Bureau of the Census. Older Americans Month: May 2017 (CB17-FF.08). Washington: Government Prin ng O ce, 2017. (Pro le America Facts for Features). (CB17-FF.08). As of November 2016, U.S seniors numbered approximately 50 million, and the projected popula on of seniors in 2060 is 98.2 million; nearly one in four U.S residents will be in this age group, and of this number, 19.7 million will be age 85 or older. Id.

With such a drama c spike in the senior populaon, both the government and private sector face a challenging landscape. Not only will government programs and resources be taxed and overstrained, but those in the private sector also face real challenges in working with/represen ng senior ci zens. All 50 states and the District of Columbia have laws designed to protect older adults. www.jus ce.gov/elderjus ce/prosecutors/

statutes. These laws vary considerably. They started out to protect seniors who are neglected or exploited by caregivers, however, many states have enlarged the de ni on of elder abuse to include "nancial elder abuse." This is generally when someone takes advantage of an older person's vulnerability or dependent condi on to deprive them of their assets. In some states, elder abuse laws apply to people 60 years or older; in others, it's 65 or older. Both criminal and civil penal es can apply to all forms of elder abuse.

California has arguably the most far-reaching elder abuse laws of any state. In California, nancial elder abuse laws apply to anyone 65 or older regardless of whether they have any diminished physical or mental capacity. Financial elder abuse is de ned as: when any person or en ty "takes, secrets, appropriates, obtains or retains real or personal property of an elder for a wrongful use or with intent to defraud." It also includes "assis ng" in the taking of any property of someone 65 or older. The de ni on of "wrongful use" is: if the person "knew or should have known that this conduct is likely to be harmful to the elder." Cal. Welfare & Ins tu ons Code §15610.30

This language is so broad that it may apply to virtually every business transac on with someone who is 65 years or older. For example, leading up to and during the recent hurricanes which have ravaged parts of Texas and Florida, there have been numerous reports of price gouging, including reports of up to \$99 for a case of water, hotels

that are tripling or quadrupling their prices and fuel going for \$4 to \$10. If someone unwingly sold a bo le of water to an elder for y cents more than its fair market value and the elder can prove you knowingly sold the water for that price, you may have just engaged in nancial elder abuse. Stua onal price gouging, deliberate or inadvertent, may be limited to mes of natural disaster, however broad nancial elder abuse laws like those in Texas or California apply to nearly every nancial transac on and may turn an otherwise innocuous sale into a nightmare. One such precau onary tale is that of Glenn Neasham, an insurance broker in California who was arrested and charged with felony the from an elder in December 2010, facing up to four years in prison.² He was ul mately convicted for selling an indexed annuity to an elderly dient with Alzheimer's-like demen a. In the process, he lost his license, annuity business, and his house. A er years of ba ling in court, Mr. Neasham's convic on was overturned on October 8, 2013 by the Court of Appeals, yet he con nues to struggle pu ng

Mr. Neasham's ordeal began in February 2008, when met with Fran Schuber, an 83-year old dient referred to him by her friend, an exis ng dient. They discussed how Ms. Schuber could earn a be er return on her money than she was currently earning from bank cates of deposit. A er discussing op ons, Mr. Neasham sold Ms. Schuber an indexed annuity for \$175,000. This caused Ms. Schuber's bank manager to express concern that Ms. Schuber was being unduly in uenced by her friend. Mr. Neasham had similar misgivings, but a erfurther inves ga on, determined that his concerns were unfounded. Unfortunately, it later became apparent that Ms. Schuber had Alzheimer's-like demen a at the me of the transac on. According to Mr. Neasham and his assistants, although they did not no ce any signs of impairment from Ms. Schuber, her friend had done most of the talking during the sale.

his life and career back together.3

The bank manager reported her concern to the California Department of Insurance, causing the district a orney to inves gate. Mr. Neasham was subsequently arrested for: (1) selling a complex and inappropriate product to an elderly woman who lacked the mental capacity to assess the recommenda on to buy the indexed annuity; and (2) that "the terms and condi ons of the annuity contract were not in her best nancial interest." Worse, he was reported to be an "unscrupulous agent" who preyed on seniors.

Mr. Neasham maintained that he did nothing wrong by selling the annuity. Namely, that Ms. Schuber showed no signs of the Alzheimer's-like demen a she

"[M]any states
have enlarged the
del nion of elder
abuse to include
'l nancial elder
abuse.'"

ELDER ABUSE AVOIDANCE, CONT'D

had been diagnosed with, that she appeared to comprehend the annuity, that the annuity appreciated in value by the me of the trial, and that it was legal to sell such annui es to people under the age of 85. He was nonetheless convicted of a felony count of the and sentenced to prison. Immediately a er the verdict was returned, a juror stated that two jurors voted to convict to "send a message" to cau on insurance agents from selling products to the elderly.

Since the reversal of Mr. Neasham's convic on, the California Supreme Court declined the request to review the decision. Moreover, a recently discovered video of Ms. Schuber from 2008 shows her speaking lucidly of the annuity she purchased. Yet Mr. Neasham's reputa on and business are s II harmed despite reissuance of a license to sell insurance again.

While this ordeal played out in the criminal courts, the poten al liability had it involved a civil lawsuit could have been equally daun ng. In any ac on for nancial elder abuse, in addi on to any actual economic damages, the elder is en tled to a orneys' fees if he/she prevails. California Welfare & Ins tu ons Code § 15657.5. Further, if the plain can show "by dear and convincing evidence" that the defendant was guilty of "recklessness, oppression, fraud or malice," the plain can also recover puni ve damages. Id. Even if the ac on is frivolous or the elder does not prevail, they are not required to pay the other side's a orney's fees. This mo vates lawyers to le lawsuits with the fee provision driving the li ga on.

So What Can You Do?

First of all, con nue to do business with seniors. Do not refuse to do business with older people out of fear it may be easy for them to sue you. Not only is this illegal, but as explained above, senior ci zens are a tremendous market for legi mate and fair business.

Second, take the me to know your clients. Before recommending the purchase of a product or service, obtain a full picture of the dient's individual needs. Evaluate the client's income and expenses including liquidity and net worth. Understand the dient's goals, including when the client may need to access funds in the future. Make sure that your product or service is suitable for the senior's needs at the me of the transac on. To gauge suitability, consider whether or not your product/service confers a bene t to the client. If you are recommending the replacement of an exis ng policy, provider or product, transac ons involving a replacement should not be made unless it is in your dient's best interest. That is, the replacement must be appropriate to your client's needs and must provide them with a bene t that is not otherwise available in their exis ng product. Also consider whether or not the dient is in a nancial posi on to allow the recommended product/service to func on as desired, in order for the client to access the full bene t.

Third, provide your dient with copies of all sales ma-

terial used or discussed. All clients, but in par cular, senior dients, require a full explana on of their op ons to make informed decisions. Encourage your client to carefully read all documents and disclosures for the product/service you are recommending. Discuss this informa on in detail and respond to any ques ons to ensure that your client understands. Frequently ask ques ons and pay close a en on to older clients to make sure they understand the product or service you are presen ng. Space out the me between when a product/service is presented and when the dient is asked to commit or purchase the product or service. Encourage your client to use the me to engage family members who may be impacted by this transac on. In some cases, it may be appropriate to suggest your dient discuss the proposed transac on with a tax advisor or independent legal professional.

Fourth, consent, decision-making capacity, and undue in uence are cri cal issues in many elder abuse cases. When these issues are raised, other forms of evidence besides the alleged vic m's tes mony may be necessary to analyze the elder's state of mind and to defend against such claims. While it may seem extreme, consider video-taping or recording transac ons where decisions are made or documents are signed to evidence the elder's understanding and consent. Modern technology gives us the ability to document or record communica ons with ease. However, the use of recording devices has serious implica ons on people's right and expecta on of privacy. Many states, including Califor-

LAW FIRM CYBERSECURITY: LIABILITY AND ETHICAL CONSIDERATIONS, BY: BARRY R. TEMKIN, ESQ.

Cybersecurity events, including hacking, are on the rise at law rms. A major professional liability insurer es mates that as many as 80% of the largest law rms in the U.S have experienced data breaches recently. When the unit is external hacking the only threat faced by law rms. Some data breaches may be a ributable to employee negligence, such as a law rm employee leaving a laptop, cell phone or other electronic device in a taxi, car trunk, co ee shop or other public place. Moreover, informa on stored in the cloud, or transmi ed via unsecured servers may be vulnerable to unauthorized intrusions.

As explained below, recent law rm data breaches have included the outside hacking by Chinese na onals into the computers of the mergers & acquisi ons groups at two major law rms, resul ng in signi cant insider trading and an enforcement case by the U.S. Securi es & Exchange Commission against the overseas na onals (but not the law rms). In addi on, former clients of a Chicago law rm have led a federal class ac on against the law rm alleging that they were injured because of the rm's failure to maintain data security.

These alarming developments have been accompanied by an increase in government scruny of regulated industries and the lawyers who serve them. In addion, the organized bar has issued recent ethics opinions which may presage a trend toward enhanced vigilance by lawyers on encrypon and other cybersecurity requirements. This arcle will analyze recent developments in lawyer cybersecurity and explain the nascent but growing trend toward stepped-up scruny of law rm data protecon, including by state ethics regulators and the organized bar.

Recent Law Firm Data Breaches

The year 2016 abounded with news of law rm data breaches, none of it happy. The data breach of Panamanian law rm Mossack Fonseca made interna onal headlines, embarrassing the rm's roster of a uent and poli cally powerful clients. See American Lawyer, April 4, 2016, "Panama Papers Put Spotlight on Law Firm Data Security." This infamous data breach shined an unwelcome spotlight on the Mossack Fonseca rm and its interna onal clients, whom the Panamanian lawyers had apparently helped set up o -shore en es to evade their respec ve countries' income taxes on eye-popping wealth.

In March 2016, the Wall Street Journal reported that two major U.S law rms had been hacked by outsiders running an insider trading scheme seeking to bene t from non-public con den al informa on about poten al mergers and acquisi ons by the rms' clients. Wall Street Journal, March 29, 2016, Bloomberg BNA, March 30, 2016. The rms were iden ed as Cravath, Swaine & Moore and Weil, Gotshal & Manges. On December 27, 2016, the U.S. Securi es & Exchange Commission announced an enforcement ac on in U.S. District Court against three Chinese na onals charged with insider trading based on hacked non-public informa on stolen from two New York based law rms. U.S. Securi es & Exchange Commission, Li ga on Release 22711/ December 27, 2016, U.S. Securi es & Exchange Commission v. Hong. According to the SEC complaint, the Chinese hackers targeted the mergers and acquisi ons departments of the rms, where they installed malware on the rm's networks, compromised accounts that enabled access to all "These alarming developments have been accompanied by an increase in government scru@ny of regulated industries and [their] lawyers ..."

LAW FIRM CYBERSECURITY, CONT'D

email accounts at the rm and accessed dozens of gigabytes of emails from remote internet loca ons. Armed with the data, the Chinese na onals went on a trading frenzy in the stocks of the M&A targets, reaping pro ts in excess of \$1 million, then moving the markets by trading in up to 25% of all trades.

And as if 2016 didn't contain enough bad news for lawyers, on April 15, 2016, a former client of Chicago law rm Johnson & Bell led a federal class ac on alleging that the rm engaged in malprac ce by its failure to maintain adequate standards of cybersecurity. See Al Faikali, Data Security Law Journal, "Law Firm Data Security: The First Class Ac on," December 12, 2016. The class ac on alleges malprac ce in that the rm, which portrays itself as an expert in advising dients about cybersecurity, was itself negligent in protec ng its own dients' data security, by its failure to encrypt an online a orney me tracking system and the use of a virtual private network known as VPN. See Andrew Strickler, "Law Firm Hacking to Breed New Kind of Malprac ce Suit," Insurance Law 360, December 12, 2016. According to the complaint, "Johnson & Bell has injured its dients by charging and collec ng market-rate a orney's fees without providing industry standard protec on for client con den ality." Id.

Aside from the fact that this is apparently the rst dient class ac on against a law rm alleging cyberinsecurity, the Johnson & Bell suit is noteworthy in that the law rm was not hacked and there were no actual known data breaches. Rather, the purported class represent a ves alleged that they were damaged by the risk that their con den al informa on might be compromised at some point in the future. A er denial of the law rm's mo on to dismiss, the court directed the par esto par cipate in arbitra on, thereby reducing the likelihood that there will be addi onal reports on the case in the short term.

New Cybersecurity Regula ons

As will be explained in the following two sec ons of this ar de, primary regulators, par cularly in health care, insurance and nancial services, have begun to regulate companies in these industries to require speci c cybersecurity protec ons. These industry regulatons will indirectly, and in some instances, directly, a ect lawyers as service providers to companies in regulated industries. In addition, law irms themselves are directly subject to regulation by courts and the organized bar, which have begun to impose ethical requirements on lawyers to adhere to standards of cybersecurity in order to maintain client contident ty. As will be seen, the trend is growing toward enhanced scruinty of lawyers' cybersecurity measures.

According to nancial services a orneys Je Kern and Christopher Bosch, nancial rms have been obligated to implement cybersecurity measures since enactment of the Gramm-Leach-Billey Act of 1999. See Je Kern & Christopher Bosch, "New York State Department of

Financial Services Cybersecurity Regula on Poised to Reshape Exis ng Regulatory Landscape," Sheppard Mullin Government Contracts and Inves ga ons Blog, January 31, 2017. Kern and Bosch write that the Gramm -Leach-Billey safeguards rule "sets forth high-level cybersecurity direc ves, but mainly delegates rule-making authority to various government regulators to promulgate informa on security rules applicable to en es under their respec ve jurisdic ons." Kern & Bosch, supra. In the nancial services sector, informa on security regula ons are promulgated by the O ce of the Comptroller of the Currency, the Federal Reserve System, the Federal Deposit Insurance Corpora on, and other agencies. Federally-regulated broker-dealers. investment companies and registered investment advisors must comply with SEC Regula on S-P, which requires regulated en es to "adopt policies and procedures that address administra ve, technical and physical safeguards for the protec on of customer records and informa on." SEC Regula on S-P. Privacy of Consumer Financial Informa on, 17 CFR §238.40. In addion, the Na onal Instute of Standards and Technology has issued a non-binding Framework for Improving Ori cal Infrastructure Cybersecurity, a voluntary riskbased cybersecurity framework.2

Nor have state regulators been idle. Massachuse s enacted a pioneering data protec on law in 2010 known as "Standards for the Protec on of Personal Informa on of Residents of the Commonwealth," which requires companies doing business in Massachuse s to encrypt personal data and to retain digital and physical records and implement network security controls, such as rewalls, to protect consumer informa on. See 201 CMR 17.00, Standards for Protec on of Personal Informa on of Residents of the Commonwealth.

The Massachuse s regula ons established minimum standards for safeguarding of personal informa on in order to ensure the con den ality of customer informa on and protect against threats or hazards to such informa on. 201 CMR 17.01, www.mass.gov/ocabr/docs/idthe /201cmr1700.

The Massachuse s standards are unique in that they reach across all industries and are not restricted to a single industry. Rather the Massachuse s law broadly applies to: "Every person that owns or licenses personal informa on about a resident of the Commonwealth," and requires such persons to develop "a comprehensive informa on security program that it is wri en in one or more readily accessible parts," and contains safeguards to protect and encrypt con den al consumer informa on. Id. at 17.03, Duty to Protect and Standards for Protec ng Personal Informa on. The Massachuse s law requires secure user authen ca on protocols, control of data security passwords, restricted access to ac ve users, unique and complex passwords and encryp on of all transmit ed records and les.

"[V]endors who do business with regulated | nancial service companies will soon be expected to comply with cybersecurity standards"

VOLUME 9, ISSUE 4 Page 15

LAW FIRM CYBERSECURITY, CONT'D

New York Governor Andrew Quomo, in December 2016, announced the promulga on of cybersecurity regula ons by the New York Department of Financial Services, e ec ve March 1, 2017. The new DFS rules apply to all en es under its jurisdic on, including insurance companies, insurance agents, banks, charitable founda ons, holding companies and premium nance agencies. The New York DFS regula ons require encryp on of all non-public informa on held or transmi ed by the covered en ty, and require each regulated company to appoint a chief informa on security o cer ("CISO"), who must report directly to the board of directors and issue an annual report, se ng forth an assessment of the company's cybersecurity compliance and any iden able risks for potenal breaches. New York 23 NYORR §501 et. seq.; see also Barry R. Temkin, "New Cybersecurity Regula ons: Impact on Represen ng Financial Ins tu ons," New York Law Journal, December 15, 2016.

Of par cular interest to law rms who represent nancial ins tu ons is §500.11 of the new DFS regulaons, which requires each covered en ty to "implement wri en policies and procedures designed to ensure the security of informa on systems and nonpublic informa on that are accessible to, or held by third-par es doing business with the covered en ty." 23 NYCRR §500.11. Thus, covered en es, including insurance companies, who provide access to personal iden fying informa on to third-party vendors must cer fy not only that their own informa on systems are adequate, but that the informa on security systems of vendors with whom they do business are also secure and protected. In other words, vendors who do business with regulated nancial service companies will soon be expected to comply with the cybersecurity standards of their represented clients. Nor does the New York DFS rule appear to be an isolated outlier. To the contrary, the organized bar is already advising lawyers to exercise care and scru ny in protec ng dient's con den al data.

Regulatory Enforcement

Par cularly in the nancial services industry, regulators have been stepping up their enforcement of cybersecurity breaches, o en with signi cant nes and penal es. For example, the SEC, in 2016, announced a se lement with Morgan Stanley Smith Barney in a case in which over 700,000 customer accounts containing personal iden fying informa on (PII), such as social security numbers and dates of birth, were accessed by a single nancial advisor, who decided that it would be a good idea to store these data on his own personal website. The nancial advisor sustained a data breach, compromising the con den al customer informa on, whereupon he was terminated by the rm. Although Morgan Stanley contacted the FBI within two weeks of learning of the breach, the SEC

claimed that the rm was responsible for the breach and extracted a \$1 million ne.

In a recent nancial industry regulatory enforcement ac on, registered broker dealer Sterne Agee agreed to pay a ne of \$225,000 for its failure to encrypt conden al data on a laptop that was le in a restaurant, thereby exposing the personal iden fying informa on of 350,000 customers. This conduct was found by FINRA to violate regula on SP and FINRA Rules 3010 and 2010. Thus, there has been a de nite up ck in regulatory enforcement of data breaches.

The Organized Bar and Cybersecurity

Law rms' dients are not the only en es subject to regulatory scru ny of their cybersecurity measures. The organized bar is now star ng to look carefully at lawyers' ethical and professional liability responsibili es to ensure the security of client data. Moreover, some jurisdic ons, notably Florida, are imposing mandatory connuing legal educa on requirements for lawyers to learn technology. Lawyers' du es of competence and con dence are embodied in ABA Model Rules 1.1 and 1.6. ABA Model Rule 1.1 provides that: "A lawyer shall provide competent representa on to a client." ABA Model Rule 1.1, Competence.

New York's counterpart is similar, and further provides, in a comment, that: "To maintain the requisite knowledge and skill, a lawyer should..keep abreast of the bene ts and risks associated with technology the lawyer uses to provide services to dients or to store or transmit con den al informa on." New York RPC 1.1, comment [8]. A lawyer's ethical duty of con den ality is imposed by ABA Model Rule 1.6 which provides broadly that: "A lawyer shall not reveal informa on rela ng to the representa on of a dient unless the client gives informed consent, the disclosure is impliedly authorized in order to carry out the representa on or the disclosure is permi ed by paragraph (b)." ABA Model Rule 1.6(a). The New York Rules of Professional Conduct further require lawyers to "make reasonable e orts to prevent the inadvertent or unauthorized disclosure of, or unauthorized access to, informa on rela ng to the representa on of a client." NYRPC 1.0. (c); at ABA Model Rule 1.6 (c).

California's Standing Commi ee on Professional Responsibility and Conduct issued an ethics opinion in 2015 concluding that an a orney lacking required ediscovery competence to handle a complex li ga on must either acquire the requisite skill or associate with technical consultants or competent counsel to bring her up to speed on technology. California Standing Commi ee on Professional Responsibility and Conduct Formal Opinion 2015-193. E ec ve January 1, 2017, Florida has mandated con nuing legal educa on on maintaining technological competence, including use of encryp on and other technology to preserve client conden all data. See FL Rule 6-10.3(b), h ps://

"A lawyer's duty of technological competence may include having the requisite ... knowledge to reduce the risk of disdosure of dient informa\text{\text{On}} on"

LAW FIRM CYBERSECURITY, CONT'D

oridabar.org (requiring CLE in "approved technology programs").

In March 2017, the New York County Lawyers Associa on issued its opinion on lawyers' ethical duty to ensure technological competence. See NYCLA Ethics Opinion 749, March 2017, www.nycla.org/NYCLA/Lawyersethicsopinions. According to NYCLA ethics opinion 749, lawyers are required by the Rules of Professional Conduct to keep up with technological developments, "cannot knowingly reveal client con den al informa on, and must exercise reasonable care to ensure that the lawyers, employees, associates and others whose services are u lized by the lawyer not disclose or use client con den al informa on." Id. at p. 4. Sgni cantly, the NYCLA ethics opinion recognizes a duty on the part of lawyers to prevent data breaches:

The risks associated with transmission of client con den al informa on electronically include disclosure through hacking or technological inadvertence. A lawyer's duty of technological competence may include having the requisite technological knowledge to reduce the risk of disclosure of client informa on through hacking or errors in technology where the prac ce requires the use of technology to competently represent the client.

NYCLA Ethics Opinion at 4, www.nycla.org/ethics. Thus, the NYCLA ethics opinion suggests that lawyers have more at stake than potenal loss of business, embarrassment or professional liability when it comes to maintaining the con den ality of client con den al informa on. While this is just a recent development, and there have been no known prosecu ons of lawyers or law rms, lawyers should be mindful of their ethical obliga ons to maintain client con den al data, whether in the cloud, in an email or in a portable device.

On May 22, 2017, the ABA Standing Commi ee on Ethics and Professional Responsibility issued Formal Opinion 477R, which addressed the ethics of "Securing Communica on of Protected Client Informa on." In its opinion, the ABA eschewed bright line rules, adop ng instead "a fact-speci c approach to business security obliga ons that requires a "process to assess risks, iden fy and implement appropriate security measures responsive to those risks, verify that they are e ec vely implemented, and ensure that they are con nually updated in response to new developments." ABA Standing Commi ee on Ethics and Professional Responsibility, Formal Opinion 477R, May 22, 2017, at 4 (quo ng from ABA Cybersecurity Handbook).

The ABA opined that the decision whether to use encrypted e-mail is fact-speci c, and that "lawyers must, on a case-by-case basis, constantly analyze how they communicate electronically about client ma ers," based upon a number of enumerated factors, including the sensi vity of the electronically-communicated informa on, the risk of cyber-intrusion and the needs of the client. Id at 7-8. In addi on, the ABA advised lawyers to understand clients' needs for cyber-security, to vet outside vendors and conspicuously to label e-mail communicaons as privileged and con den al.

Condusion

As we have seen, law rm data breaches are on the rise, running the gamut from an unencrypted cell phone or laptop le in a taxi or restaurant, up to organized hacking by insider trading rings trading in clients' stocks. In 2016, we saw the public dissemina on of con denal law rm data used to humiliate lawyers and their clients, the rst client class ac on against a law rm alleging malprac ce for inadequate data security, and the rst Securi es & Exchange Commission enforcement ac on against overseas na onals for hacking into and trading on con den al data pilfered from law rm computers.

The year 2017 has brought us a comprehensive new regula on from the New York Department of Financial Services which appears to be a harbinger of things to come, as well as new ethics opinions from the organized bar sugges ng that lawyers now have an ethical duty to maintain technical competence in order to maintain the security of client con den al informa on. These developments are forcing law rms to be cognizant of the very real and signi cant risks they face in the 21st century, and to acquire the technology su cient to keep abreast with their clients' cybersecurity needs.

LETTER FROM THE PRESIDENT, CONT'D

this e ort. If you would like to join the YPC, or nd out more about it, please e-mail Chris Jensen so that she can connect you with the group. We also have open leadership posi ons available on our D&O/Investment Professionals Liability Commi ee. If you or one of your colleagues represents directors, o cers, or investment professionals, this is a great opportunity to promote your exper se.

FIELD TRIP FUN!

Board Members

PLDF Fan

We hope you enjoy this issue of the PLDF Quarterly. The next issue of the Quarterly will be published in February and the deadline for ar cles is February 1, 2018. Please consider wri ng an ar cle, or co-authoring an ar cle with one of your younger colleagues. We welcome ar cles on developments in the law that are of interest to the professional liability bar, as well as ar cles about trial ps and tac cs.

Finally, if you are looking to refer a case to a lawyer in another jurisdic on, or to assign a professional liability daim to a defense a orney, please THINK PLDF. The website has a "member search" feature that will enable you to nd a defense a orney in a par cular state or city. The ability to help your client, or your insured, to nd capable defense counsel is one of the key bene ts of a PLDF membership.

Wishing each of you a happy Thanksgiving, Erin Higgins
